

5.31.2025

I tingle at times knowing I'm part of something so historic so grand and I'm participating directly at the front and center and seeing the potential. How about patterns within microservices architecture that could benefit from design when pushed to the limit. I've never seen something move and change so fast and on so many levels as I well and to see the benefits from tools being built with AI. And in some ways it is a race now. I have limited years and even more limited energy but AI is an enabler to do more, do it smarter.

But being in a time doesn't always clearly say what that time was and where we are headed. So what is increasing is what you can produce and in terms of quality and quantity. You can also combine this with creativity.

It was a lot of fun seeing how the AI would get through problems and figure them out sometimes admirable. Once cost reduces and speed grows that will be crazy. The foundational knowledge can be used in very powerful ways to drive practical results. Imagine in this day and age then loading up on that foundation and learning how to work with

these tools to then when the time is right, be positioned and prepared. There is a gold fever rush to all of this. And it's easy to lose one's footing and get off balance. From those other things that are important. But work has never been so exciting and all going where I was hoping it would with AI. Bringing a revolution in engineering and learning and massive growth and change for human kind. As we start to look at applications and where the domains and designers which may influence implementation into. Yet, domain driven design, what is that and why should I care?

What I'd like to do. What I can do. What I can
keep on doing. Physical limitation and need for sleep
are nearly incapacitating me with siren calls of shut
eyes. A nice film for winding the day up and fall into
a delicious all night slumber a sleep made sweet by
lack the night before. Even my original intent here on
this page had been somewhat lost and yet how grand a
search for truly new and original thought. If that can be
had or exists. The cold air from the machine to keep it
running. It gets very hot when it thinks just like we do.
And even that cold feels abstracted. This is the age of
grand abstraction. Of thought, of systems of
beautiful design, grand unified patterns.
